

Why we are different.

The Source

SolarRain is made from locally sourced ocean water, making it truly sustainable.

We don't contribute to the depletion of diminishing rivers, streams and aquifers or compete with municipal resources while residents are forced to conserve.

The Purification

SolarRain is purified with solar thermal energy, a clean and renewable energy. Unlike other desalinization methods, ours uses negligible grid power and does not pump waste back into the ocean.

Information about what is in our water and when it was made can be found online.

The Bottle

SolarRain comes in a square, biodegradable and recyclable bottle. Should the bottle end up in a landfill, it will biodegrade in as little as 9 months. Our square bottle design reduces transportation and warehousing space by 20% and economizes on shelf space as well. Our boxes are made from recycled cardboard and printed with vegetable based inks.

The Distribution

SolarRain is not shipped across the nation or across the sea. Because SolarRain is exclusively distributed in San Diego, our carbon footprint is minimized while our local community is supported with jobs, purchase of goods and tax dollars.
